Eyelash Extension After Care Instructions

- Avoid rubbing your eyes, picking or pulling your lash extensions.
- Do not use an eyelash curler while wearing eyelash extensions.
- Certain seasons may cause allergies, or an increase in shedding and may require more frequent maintenance appointments during these periods.
- Proper hygiene is one of the most important steps in maintaining your extensions. Please **wash your lashes daily** with a specially formulated foaming cleanser for eyelash extensions.
- All products used around the eye area should be oil-free. Any oil-based product (eyeliner, eyeshadow, eye cream, medication, ointment, salve, concealer, foundation, etc.) near the eye area may break down the adhesive.
- Use caution when applying creams and moisturizers around the eye area. Apply these products 1-2 hours before bedtime. Blot away excess moisture before closing your eyes for the night.
- Keep lashes away from high heat (flames, BBQ's, ovens, etc.) Lash extension tips can burn and melt.
- It's recommended to sleep on your back, if possible. A small pillow (travel, neck, etc.) may help prevent sleeping on lashes.
- Avoid water-proof eye makeup. This will make cleansing the lashes very difficult and may cause excess shedding.
- After showering, wait 5-10 minutes for your extensions to dry before brushing. Hair follicles are susceptible to breakage when wet. Brush them gently with a clean and dry mascara wand.
- **Please no mascara!** It's very hard to remove, breaks down adhesive from previous application, and interferes with bond of next application. Please arrive without eye/under-eye makeup, which interferes with proper bonding and may cause retention issues.
- Spray tanning is okay, if eyes are shielded.
- Since its totally natural for us to shed 3-5 lashes daily per eye, we recommend regular touch-up appointments every 2-3 weeks to maintain desired fullness. If you wait more than 4 weeks to get a fill, a full set will be required at the current price.
- If you have any concerns or questions about unusual symptoms, please contact us immediately or consult your physician.
